Instructions

Start the 'setup.exe' installer executable and follow the instructions.
After successful installation the control app is available via 'Programs -> Yellowtec -> PUC2 Mic LEA Control' and the newly created shortcut on your desktop.

Changes

version 3.0.14

- **new feature:** live sync hardware knob with the sliders for headphones and speaker volume in the monitor section
  (firmware version >= 3.64 needed)
- **new feature:** the monitor volume slider for the headphones in the monitor section now supports up to +15dB volume boost on the upper range of the slider
  (firmware version >= 3.64 needed)
- **new feature:** in the presets section you can now decide if the device shall start with an hard coded safety volume on the monitors (headphones and speaker) or with the ones set in the preset the device will start from
  (firmware version >= 3.64 needed)
- improves panorama and balance curves on those rotaries
- switching presets in the control app live switches presets in the device as well now
- locks against the firmware updater to gain exclusive access to the PUC2 device.
  That way you can only have one of both applications open at the same time.
  (Firmware updater version >= 2.9.87.8 needed)
